

## Message from IUGS on Earth Day 2021

### Restore Our Earth

The focus for Earth Day 2021 is '**Restore Our Earth**', and focuses on natural processes, emerging green technologies, and innovative thinking that can restore the world's ecosystems.

The International Union of Geological Sciences (IUGS) promotes the development of the Earth sciences through the support of scientific studies relevant to the entire Earth system.

Essential in **Restoring Our Earth** is the need to understand its current and future state. IUGS develops standards and inventories for the Earth to ensure we use the Earth system sustainably in our lives, but also so that we understand how human life is affecting the natural systems.

Prof. John Ludden CBE  
IUGS President
